One page, two columns

A controlled document for comparing page appearance with extracted paragraph order.

BACKGROUND

A1. Purpose

This note follows a small reading study. Keep each paragraph intact before moving to the next column.

A2. Material

The source contains selectable text. Its visual placement and its drawing order are recorded separately.

A3. Method

A reader finishes the background column first. The next part begins at the top of the results column.

RESULTS

B1. Observation

A successful word search only locates a term. It does not establish the order of surrounding paragraphs.

B2. Check

Compare the downloaded text with the visible page. Keep the block labels while inspecting the sequence.

B3. Conclusion

The result should preserve complete statements. Correct order alone does not prove every character is accurate.

Two reading zones

A spanning heading divides two separate column regions on the same page.

UPPER BACKGROUND

C1. Upper background

The upper half is one reading zone. Read its left column before continuing in its right column.

C2. Upper context

These two background paragraphs belong together. A wide section heading starts a different zone below.

UPPER FINDINGS

D1. Upper observation

This paragraph continues the upper zone. It should remain above the wide section heading.

D2. Upper conclusion

Finish the upper zone before moving down. Do not combine a lower paragraph with this section.

S1. A full-width section heading

This heading separates the upper and lower reading zones.

LOWER BACKGROUND

E1. Lower background

The lower half starts a new two-column section. Its background comes before its findings.

E2. Lower context

Keep this paragraph with the lower background. The next content belongs to the right-hand column.

LOWER FINDINGS

F1. Lower observation

This statement belongs to the lower findings. It must not appear before the wide heading.

F2. Lower conclusion

Check the final paragraph and page boundary. Preserve the original PDF as the reference.
