Project labels: a glossary demo

Self-authored English source for a translation workflow test.

1. Read the same labels in context

The Orion Buffer stores three packets before passing them to the Harbor Window. The Review Gate checks the status before release.

During the second pass, the Orion Buffer sends the same three packets to the Harbor Window. The Review Gate records one approval for this batch.

2. Check the table as well as the paragraph

Project label	Role	Example value
Orion Buffer	Store the batch	3 packets
Harbor Window	Pass the batch	5 ms
Review Gate	Approve the batch	1 approval

3. Scope of this example

These three component labels belong to an imaginary project. They are not real products, scientific standards or universal translation recommendations.

Compare the exported translation with this source. A glossary can specify preferred project wording, but the whole sentence, numbers and table still need review.

项目标签：术语表演示

用于翻译工作流测试的自撰英文源文。

1. 在上下文中阅读相同的标签

Orion 缓冲区在将三个数据包传递给 Harbor 窗口之前先存储它们。Review Gate 在发布之前检查状态。

在第二轮处理中，Orion 缓冲区将相同的三个数据包发送到 Harbor 窗口。Review Gate 为此批次记录一次批准。

2. 同时检查表格和段落

项目标签	角色	示例值
Orion 缓冲区	存储批次	3 个数据包
Harbor 窗口	传递批次	5 ms
Review Gate	批准批次	1 批准

3. 本示例的范围

这三个组件标签属于一个虚构项目。它们不是实际产品、科学标准或通用翻译建议。

将导出的译文与此源文进行比较。术语表可以规定项目首选措辞，但仍需审查整个句子、数字和表格。
