

Tray notes: Set B

Self-authored fictional records for checking multi-document answers.
Each PDF is one independent source. Values below are not real field data.

01 Recorded quantities

Observation period	10 days
Number of trays	8
Number of seedlings	24
Daily water total	600 mL/day
Temperature	20 C (one reading)

02 Reading boundaries

The recorded temperature was 20 C, from a single reading.
No control group was included. Growth outcomes were not measured.
This note does not claim that more water improves growth.
Daily totals and observation periods describe different quantities.
